

SAVE OUR BEACH

Today, Walton County Commissioners will be asked to take the next step forward in a misguided and costly plan that will ruin our pristine beaches.

Don't let Walton County politicians, led by TDC Executive Director Jim Bagby, turn our sugar-white beaches dirty brown.

*Save our beach.
Protect taxpayers.
Defend property rights.*

The proposed beach nourishment project will cost taxpayers more than they say

TDC Executive Director Jim Bagby claims the project would cost taxpayers \$61 million, "probably more." The Army Corps of Engineers has estimated it will cost taxpayers **WAY** more – \$239 million. The county has **REFUSED** to rule out using property taxes or any other tax or special assessment on Walton County citizens to pay for this misguided project.

Walton County's sugar-white beaches will be covered by dirty brown sand

The beaches in Walton County are among the best in the world, known for their sugar-white sand. The inferior sand that would be pumped onto our coastline comes from a source never before used for such projects.

Walton County politicians want to grab the property rights of hundreds of property owners

County Commissioners may soon send "Requests for Easement" to hundreds of homeowners. If you receive this request, **DO NOT** sign it. This action is a blatant land grab by the government that will dramatically reduce property values. Don't sign away **YOUR** property rights!
